Project Design Phase-I

Solution Architecture

Date	30 October 2023
Team ID	**142C44E14A49083978B4B8DF78E7C8E7**
Project Name	Farmer Insurance Chain
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.

- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.

- Provide specifications according to which the solution is defined, managed, and delivered.
